*Simple description  
and user manual*

## Introduction

At present developers of whole world, who use MetaQuotes MQL4 language has a problem to protect their code. Someone using protection by DLL, someone by other way. This tool able protect current ex4 compilant from decompiling by Ex4-to-Mq4 decompiler application.

Any attempts to decompile secured by **SecureEx4** application will be unsuccessful:

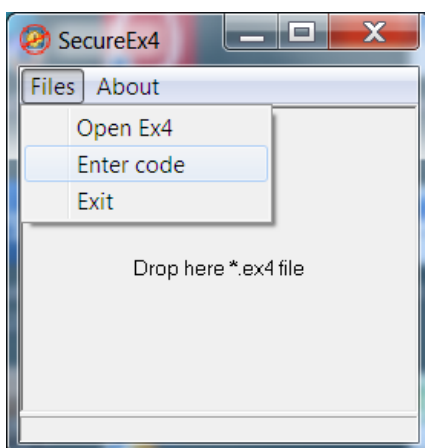

You do not need more some huge and hard decision with dll coding approach. Just secure your code and compiled file ex4 by **SecureEx4** application.

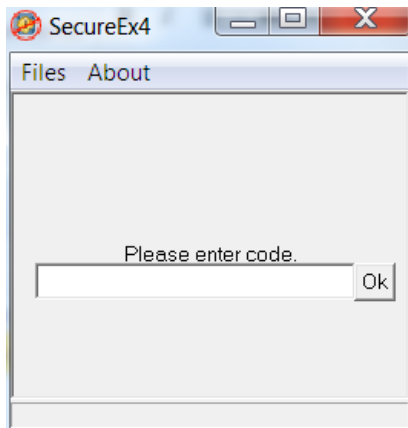

## How it use

After purchasing this application you have to enter unblocking code to open securing possibility. To do this follow simple step:

1. After run SecureEx4 app. In main menu select "Enter code" menu item.

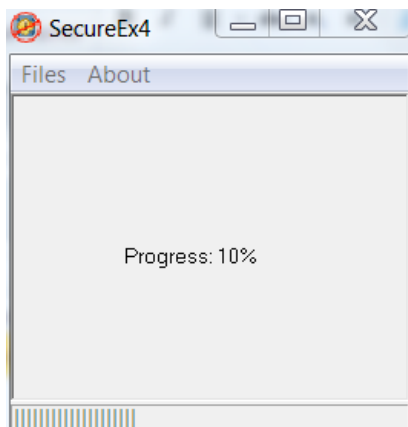

- Text field will be appeared:

- Enter your code (you received an e-mail after purchasing with this secure code word) and press Ok button.

After unlock action your SecureEx4 application is ready to protect yours ex4 files.

- Just drop a file ex4 on little window if SecureEx4 app and protecting process will be executed.

After completing this process, your protected file will be created at same source directory, where unsecured ex4 file was stored. The new secured ex4 file will be named in this way:

[your ex4 filename]~.ex4
